BUI HUU TIEN

FULL-STACK DEVELOPER

buihuutien2002@gmail.com | Hanoi, Vietnam | tienbui.info.vn

PROFESSIONAL SUMMARY

Full-stack Developer with 3+ years of experience building web applications and backend APIs. Delivered features end-to-end on 2 production EdTech platforms serving 15,000+ users. Experienced in building multi-tenant SaaS systems and serverless backends, and in integrating LLMs into production (structured output, validation, human-in-the-loop). Proactively uses AI-assisted development tools to accelerate delivery.

WORK EXPERIENCE

Software Engineer | Protean Studios — 02/2025 - 10/2026

- Develop and maintain web applications and backend APIs for EdTech, SaaS, social mobile, and AI-powered automation products.
- Own features end-to-end, from business analysis and database design to API, UI, and production deployment.

Projects

EdTech Platforms – Prep4u & Edly · prep4u.vn · edly.vn

02/2026 – 08/2026 · Team of 3-6 · Full-stack Developer; led a team of 2 developers
Two in-house test-prep products for SAT and IELTS, running in production: Prep4u (12,400+ users, ~110,000 questions) and Edly (3,200+ users, 61,000+ questions, partly built on the Prep4u platform).
Tech stack: Laravel 10, Livewire 3, Vue 3, TypeScript, Inertia.js, MySQL, MongoDB, Redis, OpenAI API, Docker, GitHub Actions
Prep4u: *Skill diagnostics, learning analytics & retention*

- Researched and built a **Readiness Engine** that scores SAT readiness (0–100) and predicts scores (400–1600). Combines Wilson score lower bound with Bayesian smoothing weighted by data confidence, includes anti-inflation safeguards, and uses event-driven Redis cache invalidation.
- Developed a **Weakness Map** that analyzes weaknesses across a skill tree using difficulty- and recency-weighted accuracy with mastery ceilings. Each weakness links directly to targeted practice, with the funnel tracked in GA4.
- Designed and built a **Placement Test** following the Digital SAT multistage adaptive model: routes Module 2 (Easy/Hard) by estimated ability, using transactions and row locks to prevent race conditions. Added a 16-question **Quick Diagnostic** as an onboarding funnel, with tier-gated results to drive upsell.
- Proposed and built a **Sales Retention CRM** and **Retention Dashboard** (D1/D7/D30 cohorts): 5 user segments, priority scoring by business value, sales playbooks, and post-contact reactivation tracking; 30 REST APIs.

Edly: *Learning features, LMS & AI*

- Proposed and independently built the **Dictation** feature: turned IELTS Listening tests into sentence-by-sentence timestamped practice; used OpenAI to batch-generate translations and vocabulary with retry/backoff and output quality checks; optimized SEO with SSR, JSON-LD, and canonical URLs.
- Developed the SAT exam room logic and a **module-based assignment flow**: admins share tests with teachers, and teachers assign work to classes and students within the modules they own. Contributed to Classroom/LMS features.
- Built an **AI question analysis** feature with OpenAI that generates transcripts and classifies difficulty and category for the question bank.

Benerio – SaaS Google Business & SNS Management Platform

2025 · Development & maintenance · Team of 2-3 · Full-stack Developer
Multi-tenant SaaS platform that helps businesses manage their Google Business Profile and social media accounts.
T*ech stack: Next.js 14, React, TypeScript, Supabase (PostgreSQL), TailwindCSS, Vercel*

- Developed a **multi-tenant system with 70+ API endpoints**; integrated OAuth, Google Business Profile API, and Instagram Graph API.
- Built a **multi-provider AI module** (OpenAI, Anthropic, Google) for content generation and translation.
- Designed **role-based access control** (Admin / Worker / Viewer) with Supabase Row Level Security; built a **plugin architecture** for GBP Manager and SNS Manager.
- Developed scheduled posting and periodic analytics sync; wrote unit and E2E tests with Jest and Playwright.

Snacktime AFP – AI Social Mobile Backend

2025 · Team of 2 · Backend Developer
Backend API for a social app where users create AI-generated images with friends.
Tech stack: Cloudflare Workers, Hono, PostgreSQL, Redis, Cloudflare Queues, R2

- Developed REST APIs for social features: profiles, friends, feed, and notifications.
- Designed an **asynchronous AI image processing pipeline** with **Cloudflare Queues and Redis**; built **timezone-aware cron jobs** for automatic image generation.
- Implemented **retries, distributed locks, and rate limiting** to ensure system stability.
- Integrated push notifications via Firebase Cloud Messaging; optimized friend suggestions (**friends of friends**) with Redis.

AI Slack Check – LLM-powered HR Attendance Automation *(Internal tool)*

03/2026 - 04/2026 · Sole developer (design, build, deployment)
Self-initiated internal tool used by HR to automatically extract leave, late-arrival, and remote-work data from Vietnamese Slack messages for **~50 employees**, replacing manual checks.
Tech stack: Node.js, Fastify, TypeScript, Claude API, Slack Web API, PostgreSQL, React, Docker

- Designed a **hybrid rule-based + LLM pipeline** that preprocesses and normalizes data before calling Claude for structured extraction.
- Applied prompt engineering with few-shot examples and JSON schema; validated LLM output before persisting.
- Built a **human-in-the-loop** mechanism with confidence scores, review flags, and a raw-data audit trail.
- Developed incremental Slack sync, REST APIs, and an HR dashboard; containerized with Docker and deployed on Vercel, Railway, and Supabase.

Other Contributions

- Maintained and improved an e-commerce system built on EC-CUBE.
- Developed and fixed UI for WordPress projects.
- Contributed features and bug fixes to multiple web projects using React and Laravel.

Software Engineer | Musashi Vietnam **04/2023 - 11/2024**

- Developed and maintained outsourced projects for Japanese clients.
- Converted Figma/XD designs into responsive HTML and WordPress themes.
- Implemented features with Vue.js, Laravel, and MySQL.

EDUCATION

Website Design

FPT Polytechnic College

- GPA 7.9/10

09/2021 - 05/2023

TECHNICAL SKILLS

Front-end	JavaScript, TypeScript, Vue 3, React, Next.js, Inertia.js, Livewire, Tailwind CSS, HTML/CSS/SASS
Back-end	PHP, Laravel, Node.js, Hono, Fastify, REST API
Database	MySQL, PostgreSQL, MongoDB, Redis, Supabase
Cloud / DevOps	Cloudflare Workers/Queues/R2, Docker, GitHub Actions, Vercel, Railway
AI / APIs	OpenAI, Anthropic Claude, Google Business Profile API, Slack API, Firebase FCM
Tools	GitHub, GitLab
